

The economic dependency ratio shows the relationship between persons in dependent age (0–14 and 65+) and persons in potential labour force age. High values can, for example, lead to burdens in social security and/or education expenses.

Vienna and the Hungarian and Slovak parts of CentrOPE are below the region's average of 50, especially in Trnavský kraj, whereas Lower Austria, Burgenland, and the Czech Republic values above average.

Economic dependency ratio 2019

Relation between dependent ages 0-14/65+ and labour force age population

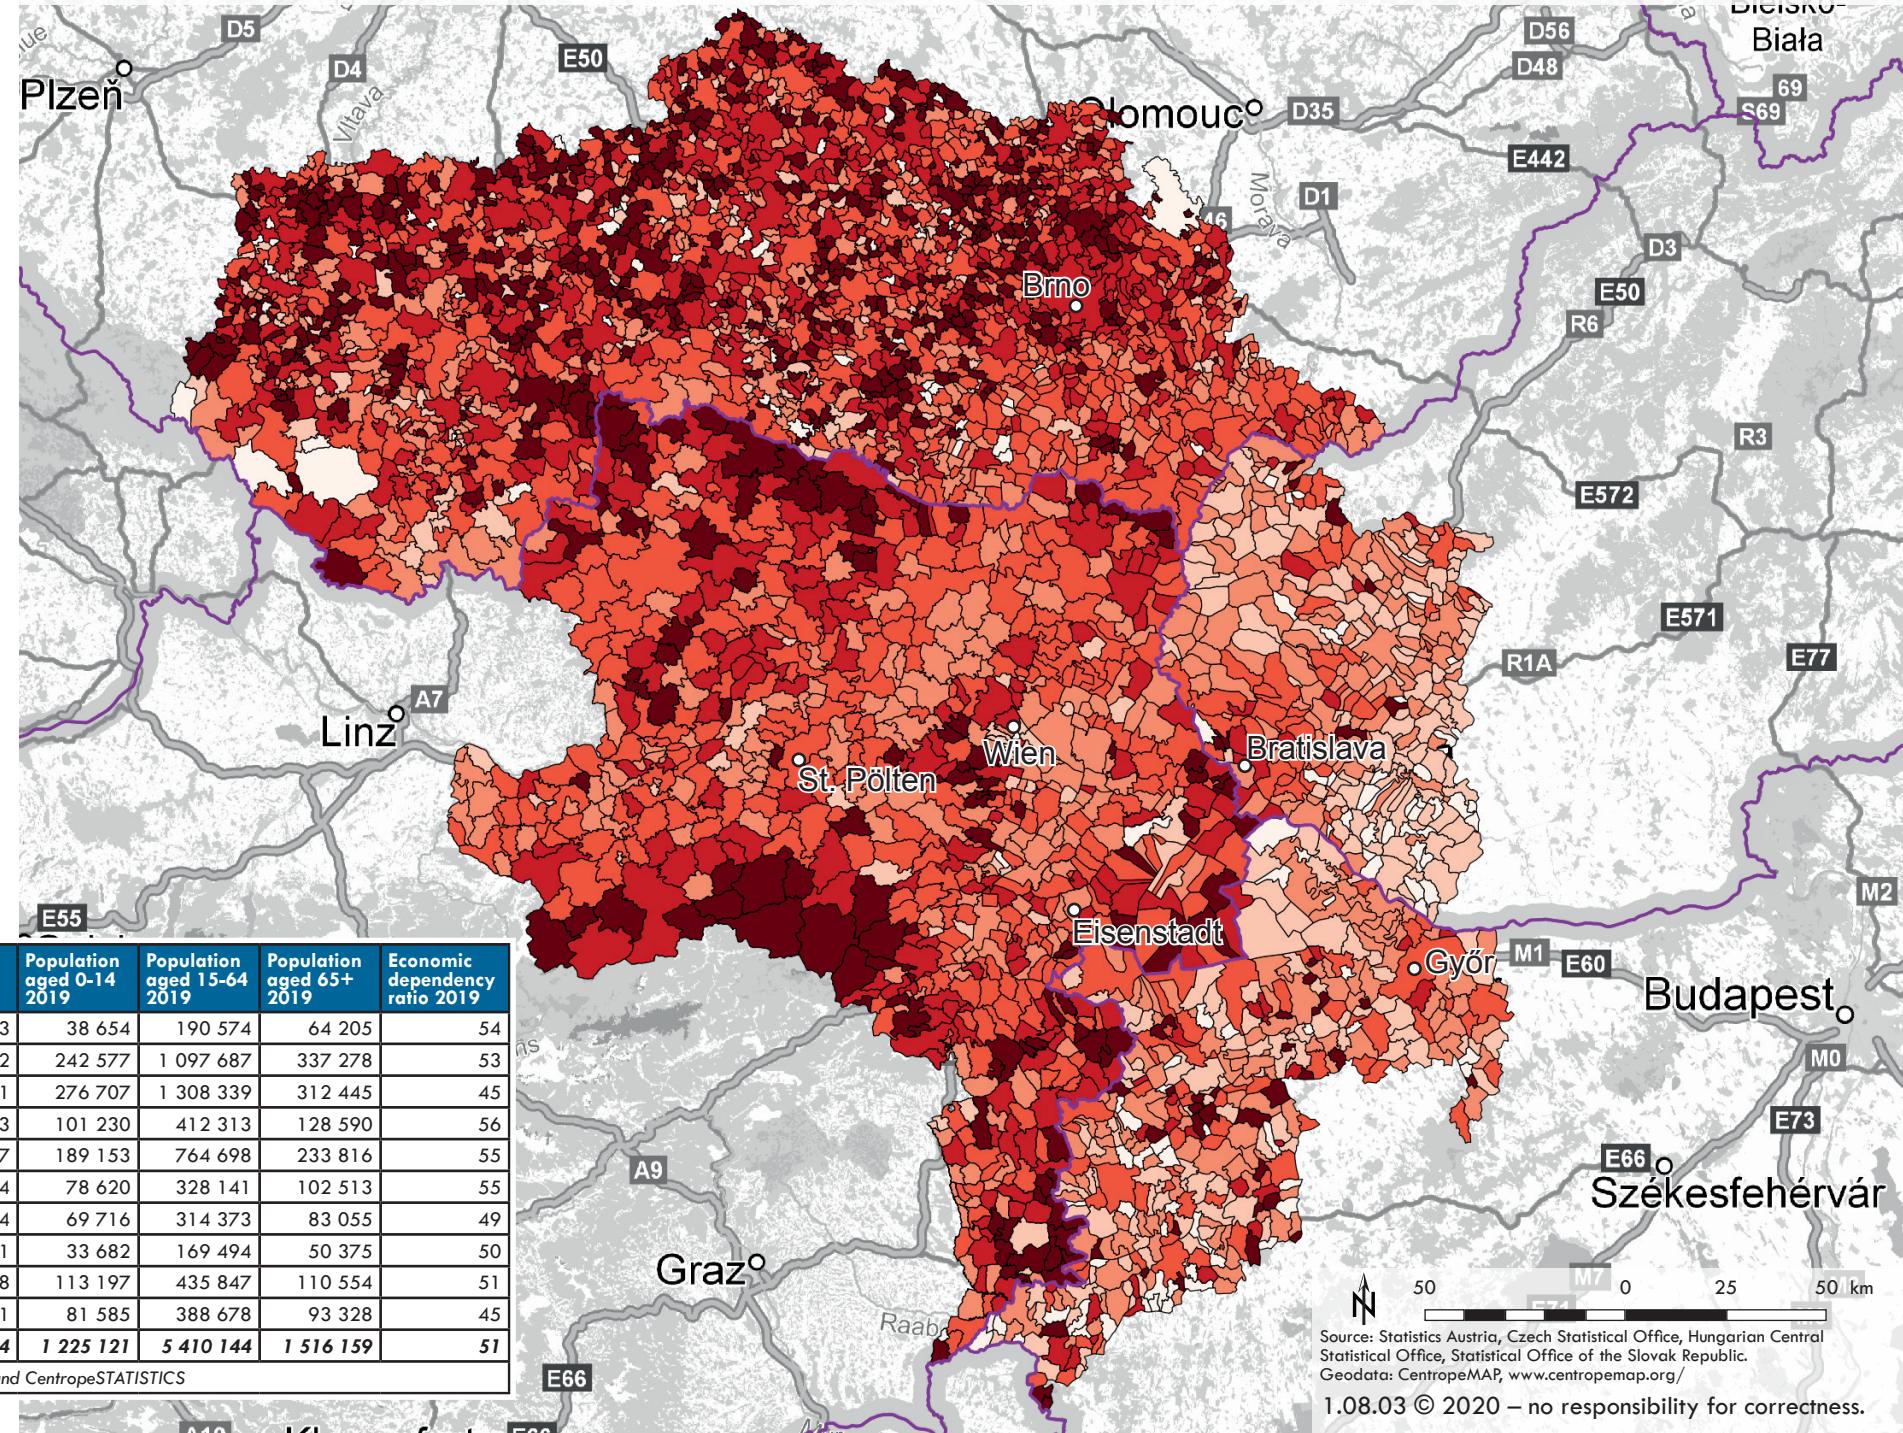

Economic dependency ratio¹ 2019 (population aged 0-14 and 65+ divided by population aged 15-64)
